Comments related to the table	<p>Target population structure was estimated with the EHIS wave 3 weighted sample. Data on education and activity are not available for nonrespondents. Data on degree of urbanisation are associated with the place of residence at the time of data collection in the target population and for the respondents, at the time of the sampling frame for the whole sample and nonrespondents. Household size comes from answers to the survey for the target population and respondents, and from fiscal data in 2018 from the whole sample and the nonrespondents.</p>
